## Introduction

Building on our flagship ‘Specialised Training on the Regulation of Gas Markets’, this new course is taking place online this year and with a renewed programme, which considers the recent developments impacting gas markets in Europe and worldwide. Understanding gas market dynamics has never been more important than today.

The course starts with a three-week preparatory block to provide participants with the core knowledge and instruments needed to approach the study of gas markets, regulation, and policy. After completing the introductory materials, participants will further develop their understanding through online live classes. The live sessions will involve key experts and provide a more in-depth perspective of gas market dynamics. They will also compare regional gas market models and developments, covering the building blocks of European gas regulation and views on the future of gas in an evolving international landscape.

Course structure:

**Week 1 to 3 (24 October – 13 November 2022)** | Offline preparatory weeks

**Week 4 (14-18 November 2022)** | Online live classes
