Introduction

Building on the success of our flagship online course, *Specialised Training on the Regulation of Gas Markets*, this year's edition takes place in person with a refreshed and expanded programme.

As global gas markets continue to experience unprecedented shifts—driven by geopolitical developments, decarbonisation efforts, and evolving regulatory frameworks—understanding the dynamics of gas markets has never been more critical. To this scope a special session on Day 1 will host experts from the United Nations and the International Gas Union.

This intensive course brings together leading experts and practitioners to provide a comprehensive and in-depth perspective on gas market regulation. Through interactive lectures, case studies, and panel discussions, participants will explore regional gas market models, key regulatory principles, and future trends shaping the sector. The programme also offers a comparative analysis of European and international gas markets, equipping attendees with the knowledge and tools to navigate the evolving energy landscape effectively.

With a strong focus on real-world applications and expert insights, this course is designed for professionals seeking to deepen their understanding of gas market regulation, infrastructure, and trading in a rapidly changing global context.
