Introduction

The FSR Energy Innovation Area and the Young Scholars Initiative (YSI) of the Institute for New Economic Thinking (INET) have the pleasure to invite you to participate in the second edition of the Energy Innovation Bootcamp.

Energy transitions imply disruptive innovations and that is what drives the Bootcamp's topics. We aim to discuss industries as complex and evolving systems. We are interested in their dynamics, networks, interactions, and heterogeneity. Our strategy is to bring together scholars from within and outside energy industries to cross-fertilise discussions on energy transition and complex adaptive systems.

During mornings, the event will provide presentations on the state of the art of the discipline on a specific topic. At the end of each morning, the workshops will elaborate on specific research questions or methodologies, in the format of a roundtable followed by open Q&A.

In the afternoons, the academy seminars will take place. They are designed to give participants the opportunity to present and discuss their own research with experienced mentors and the rest of the participants of the academy.

The Energy Innovation Academy is organised under the scientific supervision of Miguel Vazquez (FSR Energy Innovation), with the support of Gustavo Andreao, Vanessa Avanci, Fernanda Steiner Perin and Danilo Spinola from the YSI Complexity Economics Working Group.
