Transport

**CONNECTING  
EUROPE**

# The trans-European transport network (TEN-T)

## Infrastructure standards:

- Technical Specifications for Interoperability (TSIs) on infrastructure;
- E.g. full line electrification, full ERTMS deployment, 22,5 tons axle load, 740 m train length
- Availability of "clean fuel" charging infrastructure for all modes

# The Connecting Europe Facility (CEF)

The EU funding instrument for strategic investment in transport infrastructure

- Missing links at border crossings or on other parts of the network
- Upgrading measures to reach the quality standards (e.g. electrification, ERTMS) or higher capacity standards
- Construction or upgrading of multi-modal connecting points
- ITS equipment for all transport modes (including, where relevant, certain on-board components)
- Infrastructure for innovative fuel vehicles (e.g. charging)
